

The scatter plot displays the relationship between the number of hours per week (X-axis) and the number of days per week (Y-axis). The X-axis ranges from 100 to 180, and the Y-axis ranges from 0 to 10. The data points are represented by blue dots, and a smooth orange curve represents a non-linear fit. The curve starts at approximately (100, 0.5), dips slightly, then rises to a peak of about 0.8 at 140 hours per week, before declining to approximately 0.2 at 180 hours per week. The data points are scattered around this curve, with a notable outlier at approximately (142, 10).
